

Continuum Configuration for SECURITY

Course Description

This hands-on course covers all aspects of configuring a Continuum Security system. The course begins with an operator level overview of a fully configured system. The student will subsequently configure their own system through a series of challenging lab exercises, resulting in a comprehensive understanding of the capabilities of the Continuum Security product line.

Intended Audience

This 4-day course is intended for those who will be planning, configuring and operating installations of the Continuum Security product line.

Prerequisites

Basic computer skills; knowledge of Windows 2000/XP environment.
